**Exercise 10.15.1.7** It is given that in a group of 3 students, the probability of 2 students not having the same birthday is 0.992. What is the probability that the 2 students have the same birthday?

**Solution.** Let us define  $E$  as the event that no 2 students, in a group of 3 share a birthday

$$\Pr(E) = 0.992 \quad (1)$$

We are asked to find the probability that 2 students, in a group of 3 share a birthday. This is the event  $E'$ .

We know that,

$$\Pr(E) + \Pr(E') = 1 \quad (2)$$

From (1) and (2)

$$\Pr(E') = 1 - 0.992 \quad (3)$$

$$= 0.008 \quad (4)$$
