Exexplar 11.16.3.11 The accompanying Venn diagram shows three events, A, B, and C, and also the probabilities of the various intersections (for instance, $\Pr(AB) = .07$). Determine

- (a) $\Pr(A)$
- (b) $\Pr(BC')$
- (c) $\Pr(A + B)$
- (d) $\Pr(AB')$
- (e) $\Pr(BC)$
- (f) Probability of exactly one of the three occurs.

Fig. 0. Venn Diagram

- (e) Clearly,

$$\Pr(BC) = 0.15 \quad (14)$$

- (f) Let E be the event that exactly one of A, B or C occurs.

$$\Pr(E) = \Pr(AB'C') + \Pr(A'BC') + \Pr(A'B'C) \quad (15)$$

$$= 0.13 + 0.10 + 0.28 \quad (16)$$

$$= 0.51 \quad (17)$$

Solution.

- (a) Clearly,

$$\Pr(A) = 0.13 + 0.07 \quad (1)$$

$$= 0.20 \quad (2)$$

- (b) Clearly,

$$\Pr(B) = 0.10 + 0.07 + 0.15 \quad (3)$$

$$= 0.32 \quad (4)$$

Also,

$$\Pr(BC') = \Pr(B) - \Pr(BC) \quad (5)$$

$$= 0.32 - 0.15 \quad (6)$$

$$= 0.17 \quad (7)$$

- (c) From Axioms of Probability

$$\Pr(A + B) = \Pr(A) + \Pr(B) - \Pr(AB) \quad (8)$$

$$= 0.20 + 0.32 - 0.07 \quad (9)$$

$$= 0.45 \quad (10)$$

- (d)

$$\Pr(AB') = \Pr(A) - \Pr(AB) \quad (11)$$

$$= 0.20 - 0.07 \quad (12)$$

$$= 0.13 \quad (13)$$
